Check 5 at the far site (Pb76): the failing pair and the two passing equal-charge pairs (part-d read)
child cell
parent cell
check-5 bound (0.25 Å or 20°; it applies to child − parent at the final geometries, not to these curves)
a
child VB76 vs parent hostB76: I (host index 209)
child − parent at the final geometries: 0.381 Å (FAIL)
reference: S2-relaxed MACE host
|Δr| vs reference (Å)
b
child VB76 vs parent hostB76: FA (host index 212)
child − parent at the final geometries: 24.7° (FAIL)
reference: S2-relaxed MACE host
rotation vs reference (°)
c
child Sr76o0_novac vs parent hostB76: I (host index 53)
child − parent at the final geometries: 0.078 Å (pass)
reference: S2-relaxed MACE host
|Δr| vs reference (Å)
Configuration k (BFGS step, counted across restarts)
d
child Sr76o0_vac vs parent VB76: FA (host index 92)
child − parent at the final geometries: 0.038 Å (pass)
reference: A1 V (q = +1) geometry at Pb76
carbon |Δr| vs reference (Å)
Configuration k (BFGS step, counted across restarts)
